Pintu Kumar Yadav

Software Development Engineer II

Bangalore, Karnataka, India

(+91) 8804560520 | pintukumaryadav.min18@itbhu.ac.in | pintu-iitbhu | pintu-iitbhu

Summary

Software Development Engineer II with **4+ years** of experience building and operating high-throughput backend and distributed systems in fintech. Experienced in **payment infrastructure**, event-driven architectures, settlement and reconciliation, and production reliability, with a focus on scalability, performance, and **system design**.

Experience

Barq — Software Development Engineer II Jun 2026 – Present

Bangalore, India

- Own backend services supporting **payments, settlements, reconciliation, and banking integrations**, with a focus on scalability, performance, reliability, and maintainability.
- Contribute to **system design and architectural improvements** for **production-critical payment workflows**, improving reliability, scalability, and maintainability across service boundaries.

Barq — Software Development Engineer I Mar 2024 – May 2026

Bangalore, India

- Built and owned backend services for a digital payments platform serving **10M+ customers, 9.5M+ cards**, and **940M+ transactions** totaling **SAR 150B+**.
- Designed and implemented high-throughput payment services processing **50M+ transactions per month** across P2P, cards, remittance, and rewards.
- Contributed to **system-level design decisions** supporting growth from **0 to 10M users** while maintaining **sub-300ms API latency**.
- Built and owned **bank-integrated settlement and reconciliation pipelines**, including ANB integration, handling statement ingestion, settlement files, and transaction feeds.
- Implemented **Kafka-based asynchronous workflows** with **idempotency and retry handling** to maintain financial consistency across distributed services.
- Reduced production incidents by **25%** through improved monitoring, alerting, and operational practices while maintaining **99.9%+ uptime**.

ZestMoney — Software Development Engineer Jun 2022 – Feb 2024

Bangalore, India

- Built backend microservices powering BNPL and onboarding platforms, integrating with internal and external financial systems.
- Designed and optimized REST APIs and database access layers, reducing end-to-end latency by **40% (850ms → 510ms)**.
- Contributed to migration of legacy systems to microservices, improving scalability, deployment safety, and fault isolation.
- Implemented caching, indexing, query optimizations, and production monitoring for high-concurrency workloads, improving **MTTR by 30%**.

Projects

AI & Cloud Platform — Personal Project

- Built a **microservices-based cloud platform** with Docker, CI/CD, and Nginx, including a **RAG system** using ChromaDB and Neo4j over **1M+ documents**.
- Developed a **multi-LLM gateway** (OpenAI, Anthropic, local models) with SSE/WebSocket streaming.
- Implemented **semantic caching**, **asynchronous execution**, and **parallel retrieval** for latency optimization, along with health checks, logging, and observability.

Skills

Languages: Java, Go, Python, C++
Backend & Distributed Systems: Spring Boot, REST APIs, Kafka, Microservices, Event-Driven Architecture, Distributed Systems
Databases: PostgreSQL, MySQL, Redis
Cloud & Infrastructure: AWS, Docker, Kubernetes, CI/CD, Nginx
Core Engineering: System Design, Scalability, Reliability, Performance, Concurrency

Education

Indian Institute of Technology (BHU), Varanasi 2018 – 2022

B.Tech in Engineering **CPI: 8.70 / 10**
