

Pintu Kumar Yadav

Software Development Engineer

Bangalore, Karnataka, India

📞 (+91) 8804560520 | ✉️ pintukumaryadav.min18@itbhu.ac.in | 🌐 pintu-iitbhu | 🌐 pintu-iitbhu

Education

Indian Institute of Technology (BHU), Varanasi 2018 – 2022
B.Tech in Engineering CPI: 8.70 / 10

Experience

Barq — Software Development Engineer Mar 2024 – Present
Bangalore, India

- Built and owned backend services for a digital payments platform serving 10M+ customers, 9.5M+ cards, and 940M+ transactions totaling SAR 150+ billion
- Designed and implemented high-throughput payment services processing 50M+ transactions per month across P2P, cards, remittance, and rewards
- Made system-level design decisions to support growth from 0 to 10M users while maintaining sub-300ms API latency
- Built and owned bank-integrated settlement and reconciliation pipelines (including ANB), handling statement ingestion, settlement files, and transaction feeds
- Implemented Kafka-based asynchronous workflows with idempotency and retry handling to ensure financial consistency across services
- Owned production on-call for critical services, handling incidents, deploying hotfixes, and improving system stability
- Reduced production incidents by 25% through better monitoring, alerting, and operational improvements, maintaining 99.9%+ uptime

ZestMoney — Software Development Engineer Jun 2022 – Feb 2024
Bangalore, India

- Built backend microservices powering BNPL and onboarding platforms, integrating with multiple internal and external financial systems
- Designed and optimized REST APIs and database access layers, reducing end-to-end latency by 40% (850ms → 510ms)
- Contributed to migration of legacy systems to microservices, improving scalability, deployment safety, and fault isolation
- Implemented caching, indexing, and query optimizations for high-concurrency workloads
- Improved MTTR by 30% through production on-call ownership, monitoring, and alerting improvements

Projects

AI & Cloud Platform — Personal Project

- Building a microservices-based cloud platform with Dockerized services, CI/CD pipelines, and Nginx-based routing
- Implementing a RAG system using vector search (ChromaDB) and graph search (Neo4j) over 1M+ documents
- Designing multi-step reasoning pipelines (intent detection, planning, self-critique) to improve answer quality
- Developing a multi-LLM gateway (OpenAI, Anthropic, local models) with SSE/WebSocket-based streaming
- Working on latency optimizations using semantic caching, async execution, and parallel retrieval
- Adding health checks, logging, and basic observability as part of ongoing system hardening

Skills

Languages: Java, Go, Python, C++
Backend & Distributed Systems: Spring Boot, REST, Kafka, Event-Driven Systems, Distributed Systems
Databases: PostgreSQL, MySQL, Redis, Neo4j, ChromaDB
Cloud & DevOps: AWS, Docker, Kubernetes, CI/CD, Nginx
Core Areas: Microservices, System Design, Data Structures & Algorithms
